Playing with Good String

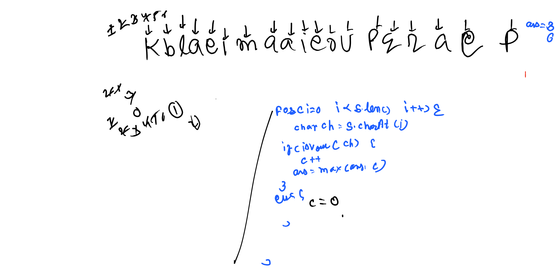
A Good String is a string which contains only vowels (a,e,i,o,u). Given a string S, print a single positive integer N where N is the length of the longest substring of S that is also a Good String.

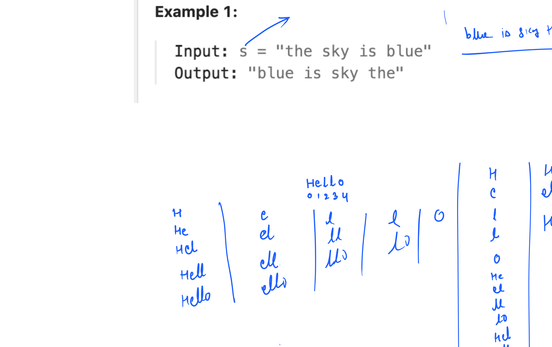
Input format

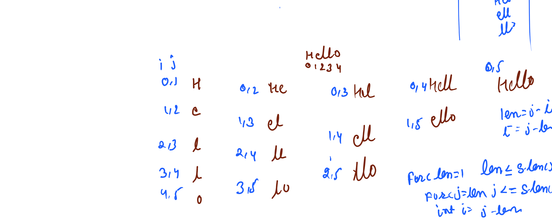
A string 'S' containing only lowercase English letters ('a' to 'z').

Output format

A single positive integer N, where N is the length of the longest sub-string of S that is also a Good String.
If no valid Good String exists, print 0.



Example 1:




```
Input: s = "the sky is blue"
Output: "blue is sky the"
```
